

*So simple. So clever. The solution for a clean and efficient workspace*

### **STEAM tube – The intelligent steam cleaning station by Renfert**

Renfert (Hilzingen, Germany) is taking steam cleaning in the dental laboratory to the next level. The new STEAM tube – the intelligent steam cleaning station – is the answer to your challenges in the dental laboratory when steam cleaning work objects, resolving frustration with the “grimy area” at the steam cleaning sink.

As an intelligent steam cleaning station, the STEAM tube keeps your workspace clean. When steam cleaning work objects, loose dirt particles and impurities are collected thanks to the innovative design of the station. As a result, residues (for example, wax or polish) from steam cleaning the object is no longer distributed randomly around the steam cleaning unit. What’s more, the STEAM tube not only protects delicate small parts, it also improves visibility of the object being processed thanks to controlled steam discharge.

The center of the STEAM tube is equipped with an asymmetric collection hopper. During steam cleaning, dirt particles are directed through its flat side into the hopper filter. A finely meshed safety filter catches any small parts that are lost and protects them against damage or loss. Moreover, the targeted steam discharge facilitates a clear view of the object being cleaned. The STEAM tube features a premium design and simple functionality. Its compact construction and rotatable hopper design enable custom adaption to ergonomic requirements and easy placement in the dental laboratory, for example directly at the sink or also free-standing. The STEAM tube can be cleaned simply by removing the hopper, filter, and collection container.

With the STEAM tube, Renfert has once again solved a longstanding challenge in the daily laboratory routine. The intelligent steam cleaning station ensures a clean workspace and actively contributes to improved working conditions. This makes the STEAM tube a perfect example of the Renfert philosophy “making work easy”.
