

making work easy

Press release

Hilzingen, Germany – September 2024

See the difference: The best worklight for the best results

Renfert's LIGHT 1 : Perfection in detail

The requirements for fatigue-free work are high. The critical factor? The light. Renfert (Hilzingen, Germany) presents LIGHT 1, a new worklight for dental technicians. LIGHT 1 is tailor-made for work in the dental laboratory and is ideal for those looking for optimum light quality.

Designed to meet the specific needs of dental technicians, LIGHT 1 provides the best light for every work situation. Optics specially developed by Renfert provide unprecedented illumination of the work area – see more, work better. Every detail and every facet of dental work becomes visible. A dedicated ray tracing technology provides uniform light distribution, high average illuminance and brilliant color and surface reproduction. This significantly improves visibility, and therefore the precision of work. User-oriented presets allow the light to be adapted to different requirements. For example, there is a daylight scenario for tooth shade determination or blue light elimination for processing composites.

Light years ahead: Pioneering work for the modern dental laboratory

Renfert sets new standards with its vision to develop the best work light for dental technology. The goal was to create a lighting environment in which errors are minimized through improved vision and accurate color recognition. LIGHT 1 achieves this through exceptional light quantity and quality: The 100 % flicker-free light creates a more comfortable and concentrated working environment, which increases the quality of work. The glare-free light is easy on the eyes and reduces fatigue.

LIGHT 1 combines simple elegance with modern lighting science. The sleek design hides sophisticated electronics. And so LIGHT 1 is not just a light – it is a promise of quality, precision and performance. The result is unmistakably Renfert: "making work easy".
